Sawn Timber

Import Permits or Declarations	An import permit must be obtained from the Conservator of Forests, Fiji.	
Certification Requirements	Phytosanitary certificate required.	
Prohibited Importations		
Bark	Free of bark.	
Insects	Free of quarantine pests.	
Fungi	Free of decay and other fungi.	
Soil	Free of soil.	
Other		
Pre-Shipment Inspections	Verification inspection is required.	
Approved Pre-Shipment Treatments	Pre shipment treatment is not mandatory for timber and timber products to be treated before they are shipped to Fiji. However, approved pre-shipment sterilisation may be stipulated in an import permit to assist quarantine processing and prompt delivery.	
Fumigation	Must be carried out no earlier than 21 days before shipment or containerisation. Methyl Bromide : 80 grams/m3 for 24 hours at a minimum of 15°C.	
Antisapstain treatments		
Insecticide treatments		
Heat treatments	Must be carried out no earlier than 21 days before shipment or containerisation.	
	Effective thickness <i>distance between fillets</i>	Duration (hours)
	Up to 25	4
	25 to 50	6
	50-75	8
	75-100	10
	100-150	14
	150-200	18
	200-250	22
	250-300	26
Preservative	Requires full sapwood penetration in all pieces. Is permanently effective	

treatments	against insects and fungi.	
	Chemical	Minimum Retention
	Boron compounds	0.2% Boric Acid equivalent minimum loading in the sapwood core
	Copper Chrome Arsenic	3.5 kg/m ³ minimum preservative retention
	Arsenic	0.04% minimum preservative loading in the sapwood core.
	Synthetic pyrethroids	Minimum retention of not less than 0.01% w/w
	Sawn timber shipped in a green or moist condition should be pre-dipped in an effective fungicidal/insecticidal solution and/or shipped filleted to allow free air movement.	
Concessional Release	None specified for New Zealand.	
General	No further information.	

Logs

Import Permits or Declarations	An import permit must be obtained from the Conservator of Forests, Fiji.
Certification Requirements	Phytosanitary certificate required.
Prohibited Importations	
Bark	Free of bark.
Insects	Free of quarantine pests.
Fungi	Free of decay and other fungi.
Soil	Free of soil.
Other	Free from needles and other contamination.
Pre-Shipment Inspections	Verification inspection required.
Approved Pre-Shipment Treatments	
Fumigation	Must be carried out no earlier than 21 days before shipment. Methyl Bromide: 320 grams/m ³ for 24 hours at a minimum of 15°C.
Antisapstain treatments	Logs must be treated with a fungicide that is approved for use in NZ.
Insecticide treatments	Logs must be treated with an insecticide approved for use in New Zealand.

Heat treatments	
Preservative treatments	Not required.
Concessional Release	None specified for New Zealand.
General	Logs must be fumigated within 24 hours of being loaded into the ships hold. Logs loaded on deck must be fumigated on wharf prior to loading, and loaded onto the vessel with 24 hours of being fumigated.
