Дата составления: 03.04.2019

OIE data as of 03 April, 2019

Azerbaijan (2008)

livestock - 2
wild - no

Armenia (2007 - 2011)

livestock - 25
wild - 3

Belarus (2013)

livestock - 2
wild - no

Belgium (2018 - 2019)

livestock - no
wild - 543

Bulgaria (2018)

livestock - 1
wild - 7

Cambodia (2019)

livestock - 1
wild - no

Hungary (2018 - 2019)

livestock - no
wild - 529

Vietnam (2019)

livestock - 211
wild - no

Georgia (2007)

livestock - 60
wild - no

China (2018 - 2019)

livestock - 115
wild - 3

Latvia (2014 - 2019)

livestock - 60
wild - 2884

Lithuania (2014 - 2017)

livestock - 67
wild - 755

Moldova (2016 - 2019)

livestock - 33
wild - 15

Mongolia (2019)

livestock - 11
wild - no

Poland (2014 - 2019)

livestock - 214
wild - 3816

Russia (2007 - 2019)

livestock - 834
wild - 558

Romania (2017 - 2019)

livestock - 1225
wild - 351

Ukraine (2012 - 2019)

livestock - 354
wild - 99

Czech Rep. (2017 - 2018)

livestock - no
wild - 221

Estonia (2014 - 2016)

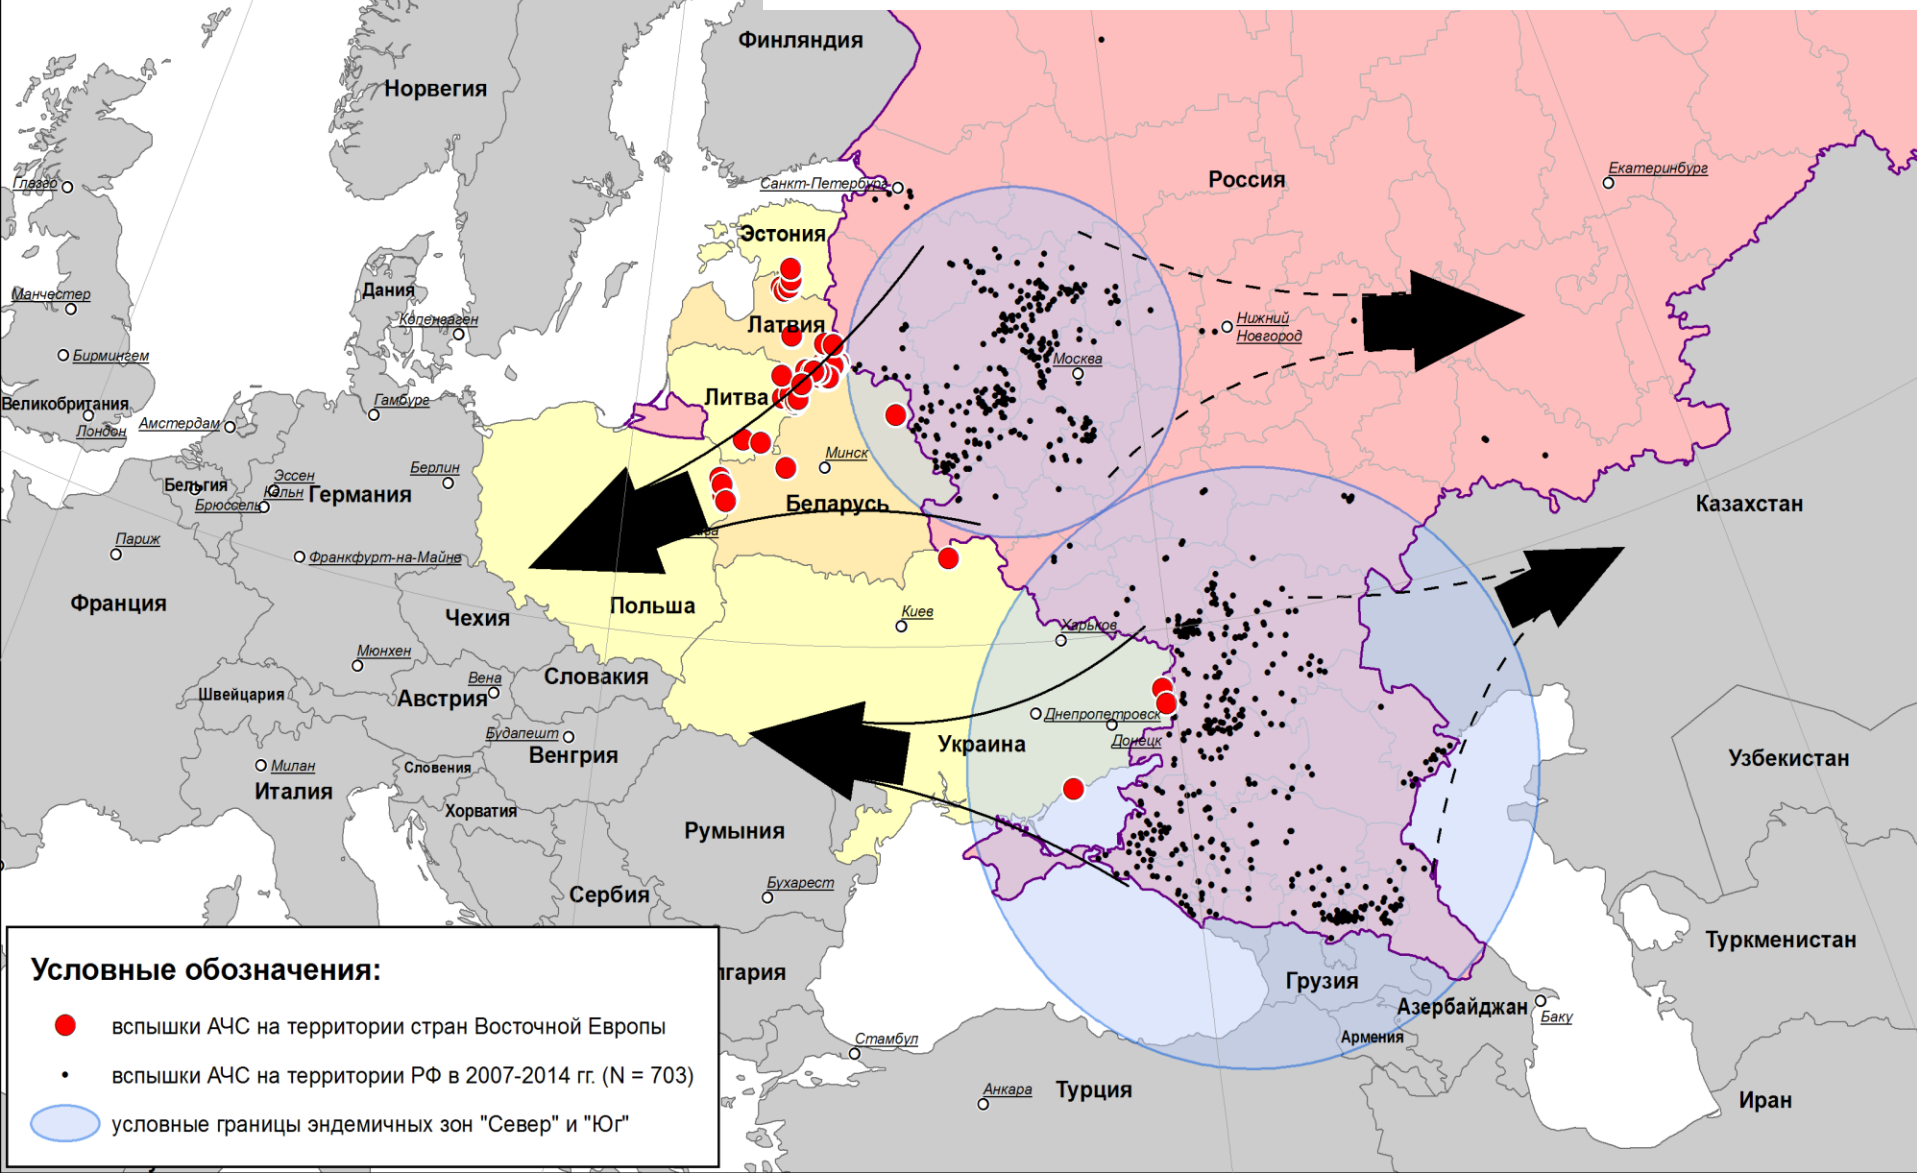

livestock - 18
wild - 1034

2018-2019!!!

- ASF outbreaks in livestock pigs
- ASF outbreaks in wild boars

Vector of risk of the ASF spread in the Eastern Europe (Forecast 2015)

Guidance on ASF prevention and eradication

*Updated in 2016

- Stamping-out
- Quarantine

- Zoning
- Monitoring

ASF zoning in Russia

- **Protection zone** - **r** min. 5 km
- **Surveillance zone** - **r** min. under 100 km,
-Geographical delimitation of those protection and surveillance zones may be enlarged in accordance with the administrative borders and natural barriers, to imply efficient control measures that can stop spreading of animal disease virus.

Outbreak – pig farm, backyard, game farm, etc. **including all** infected animals

Quarantine to prohibit movement of pigs and products of their slaughter, feed, etc.

Bloodless slaughter of all pigs.

Carcasses of killed and dead pigs, manure, feed residues, containers and low-value tools, abandoned buildings burned and buried.

Cleaning and disinfection (3 times). disinsection, tick-control and disinfection.

Quarantine is lifted on an ASF-infected farm after the destruction of all animals, and of the final disinfection (pursuant to the decision of the head of the region).

Containment zone - the area of min 5 km around the outbreak

Purchase of all pigs with subsequent sending them to a certain meat processing plant

Meat and other slaughter products from pigs are processed into boiled sausages or canned pork

Prohibition of the movements of pigs and their slaughter products. Posts, disinfection barriers on the roads

Surveillance zone - the area of 100 km around the outbreak

The prohibition of trade in pigs and pig products on markets

Rapid verification of the number of pigs in a surveillance zone. Free ranging is prohibited. Immunization against CSF and swine erysipelas.

Shipment of samples from all dead animals for diagnostic purposes.

If you suspect an ASF outbreak, carry out activities in the outbreak without waiting for laboratory confirmation.

Ban on animal movements , organization of shows and fairs.

The experiences and practices regarding to the Prevention and Control of ASF

**ENSURING ANIMAL HEALTH AND FOOD SECURITY
OF THE RUSSIAN FEDERATION**

**ENSURING COMPLIANCE WITH THE LAW (LEGISLATION)
WITHIN THE RUSSIAN FEDERATION**

Strategy for ASF control and eradication program in the RF regions includes the following elements:

*early
detection and
laboratory
confirmation
of the
disease*

*early
identification
of infected
and
potentially
infected
sites,
including pig
houses, cold
stores*

*rapid
destruction of
carcasses
and animal
care items,
disinfection*

*rapid
imposition of
effective
quarantine in
the infected
and
potentially
infected
areas*

*rapid
communication
about the
disease and
effective control
to prevent the
movement of
pigs and pig
products*

*depopulation
and control of
the number of
wild boars*

ASF epizootic situation in Russia (2007-2019)

Карта составлена
информационно-аналитическим центром
Управления ветеринарии Россельхознадзора.
Дата составления: 22.03.2019

* По данным срочных сообщений ветслужб субъектов РФ
(на основании Приказа МСХ РФ №189)

- ASF outbreaks in livestock pigs
- ASF outbreaks in wild boars

ASF-infected commercial pig farms in the RF, 2007 - 2018

Legend:

- ★ ASF outbreaks on commercial pig farms, 2018
- ASF outbreaks on commercial pig farms, 2007 - 2017
- Regions where ASF outbreaks were detected on commercial pig farms in 2018

Domestic pig population in Russia (2007-2018):

Main initiatives of the RF on ASF:

I. Enhancing legal, regulatory preparedness and coordination for ASF at national level

- **Command Center of the RF Government**
interdepartmental commission coordination.
- *Federal plan for ASF control.*
- *Compartmentalization*
- *Regionalization*
- *Update the Guidance on ASF*

II. Increasing the competency of VS officials, extending the capabilities of VSs and enhancement of the animal disease surveillance system

- *Monitoring and capacity assessment VS*
- *Strengthened of the ASF surveillance*
- *Electronic information system implementation*
- *Training (capacity building)*
- *Exercises/Drill (simulations)*
- *Scientific advice (ARRIAH; SSINRRIVV&M)*

III. Awareness-raising (informing)

- *Improvement of the process of **national** and international notification*
- *Participation of the RF in the international expert initiatives(GF TADS), FAO;OIE)*
- *Maintenance of the official site and support for pig industry media*
- *Bilateral international cooperation*

I. Enhancing coordination for ASF at national level

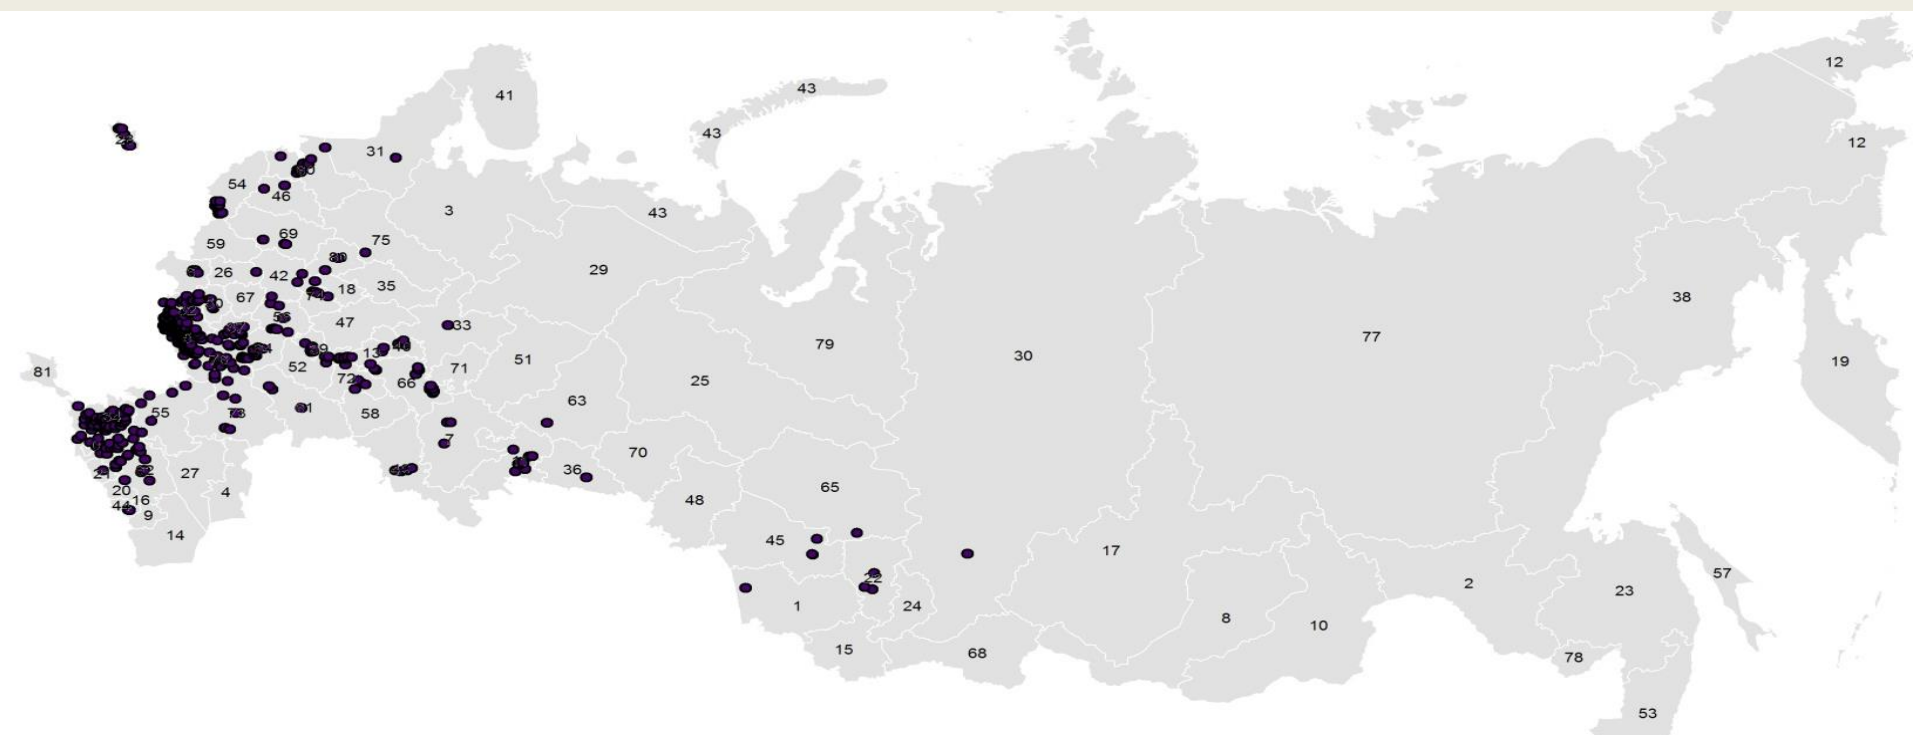

Command Center of the RF Government (coordination on a federal level)

Interdepartmental commission

I. Enhancing legal, regulatory preparedness for ASF at national level

Updating of the control and eradication ASF plan*
(annually)

Compartmentalization*
Order N 258 (2010)

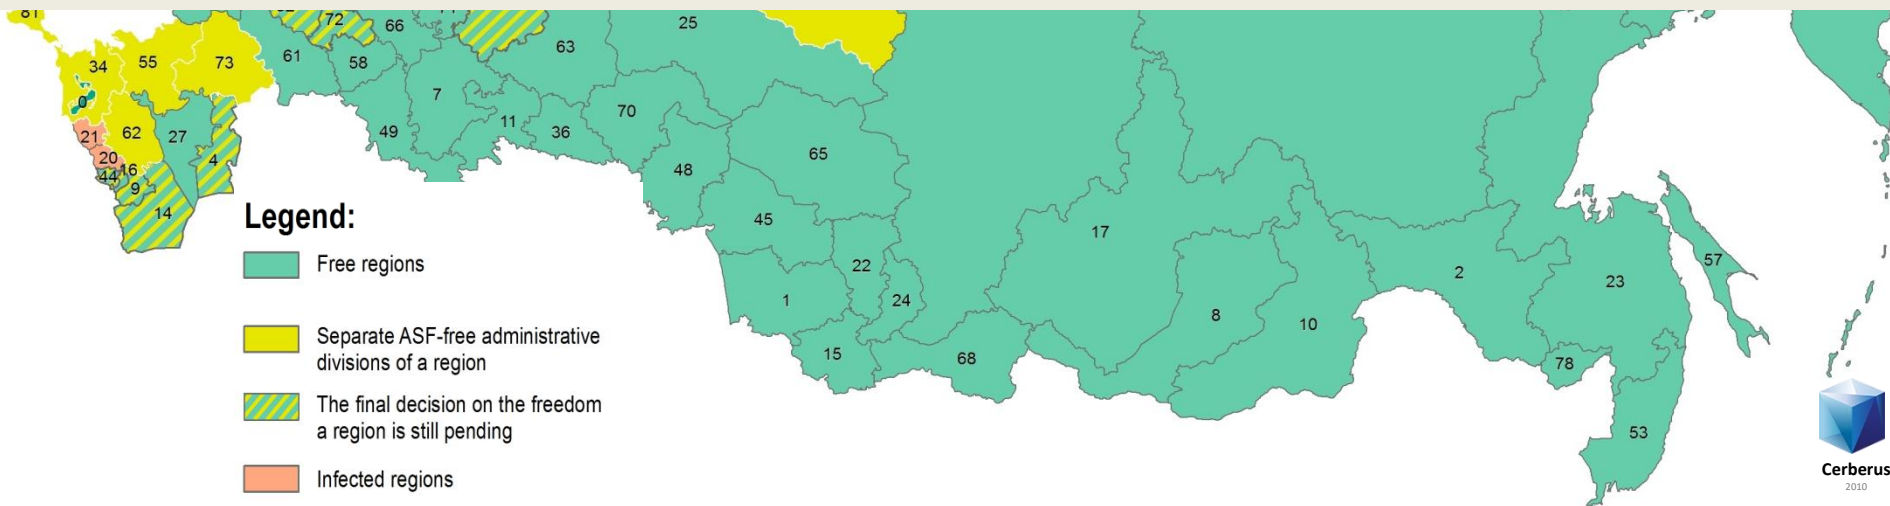

***Updating of ASF Guidance (2016)**

***Regionalization**
Order 635 (2015)

I. Enhancing legal, regulatory preparedness and coordination for ASF at national level

Regionalization

- Delineated by administrative and natural barriers, exceeding epizootic zoning
- Low risk commodities may be traded under Additional specific health conditions (OIE)
- Enhanced surveillance inside and outside the infected region
- Urgent adoption of emergency measures
- Immediately applicable
- Decisions are published on the Official FSVPS site as necessary <http://www.fsvps.ru/fsvps/regional>
- The statuses of the regions are entered into the "Cerberus" information system <https://cerberus.vetr.ru/cerberus/regionalization/pub>

Order No. 635 of the Ministry of Agriculture of Russia (Dec.2015) "On approval of the Veterinary Rules for the regionalization of the territory of the Russian Federation"

I. Enhancing legal, regulatory preparedness and coordination for ASF at national level

Compartmentalization

- **Biosecurity** (*high level protection*)
- Regulation of trade and movements between farms (*live pigs, feed e.t.c*)
- Enhanced surveillance inside farms
- Animal free zone around farms

Commercial pig farms
(the highest (4) level
compartments)

Order N 258 "On the approval of the rules for determining the zoosanitary status of pig farms, as well as organizations engaged in the slaughter of pigs, processing and storage of pig products» (Reg. Ministry of Justice Nov.12, 2010 N 18944)

0 495 990 Km

II. Surveillance Strengthening

100% **ALL RUSSIAN TERRITORIES
ARE COVERED BY ASF MONITORING**

100% **STRENGTHENED
ASF
SURVEILLANCE**

Disease surveillance in commercial and backyard pig populations has been strengthened

0,25 **DECLINE IN
POPULATION**
**ANIMALS PER
HECTARE**

Disease surveillance has been strengthened and the population density has been reduced to 0.25 animals/hectare

II. Raising the functionality of the veterinary service

VETIS system

Movement control of veterinary and sanitary unsafe regulated goods and prevention of their further distribution in the Russian Federation are among the basic goals of the Federal Service for Veterinary and Phytosanitary Surveillance.

Information system VETIS was developed and implemented for the purpose of external and internal control of goods being manufactured in the Russian Federation or imported hereto as well as for the control of document management for such goods and rapid Rosselkhozadzor's decision-making in their respect. **Vetis** allows tracing, analyzing and controlling of the above mentioned chain.

Vetis consists over **13 integrated information systems** including:

- **Argus** – control of regulated product movements across the border of the Russian Federation and Customs Union.
- **Vesta** – automated system for laboratory network activities.
- **Mercury** – system for electronic veterinary certification.

One of the basic goals is traceability of the product movements.

II. Raising the competency of VS officials

100%

**VS OF ALL RUSSIAN
SUBJECTS HAVE BEEN
TRAINED THROUGH
ONGOING ASF
WORKSHOPS**

Agencies for VS in all russian regions have specialists who have improved their qualification .

100%

**VS OF ALL RUSSIAN
SUBJECTS HAVE
CONDUCTED
EXERCISES ON ASF**

Field simulation exercises with focus on ASF have been conducted in all regions of the RF where swine are kept.

24/7

**ONLINE AND ON-
SITE
CONSULTATIONS**

Scientific advising is provided to the specialists of VS on outbreak investigation, laboratory diagnostics and data analysis on an ongoing basis.

II. Raising the competency of VS officials

Federal Governmental Budgetary Institution
«Federal Centre for Animal Health» (FGBI "ARRIAH")

- *Regular ARRIAH workshops on ASF and other viral diseases of swine.
- *Trainings on ASF and CSF prevention and control and diagnostic

II. Raising the competency of VS officials

Field simulation exercise

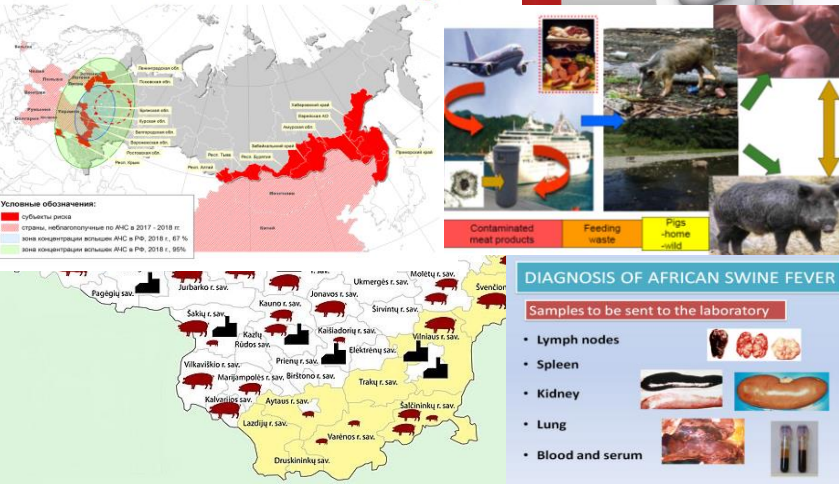

III. Awareness-raising (informing)

www.fsvps.ru/fsvps/asf

<http://web.oie.int/RR-Europe/eng>

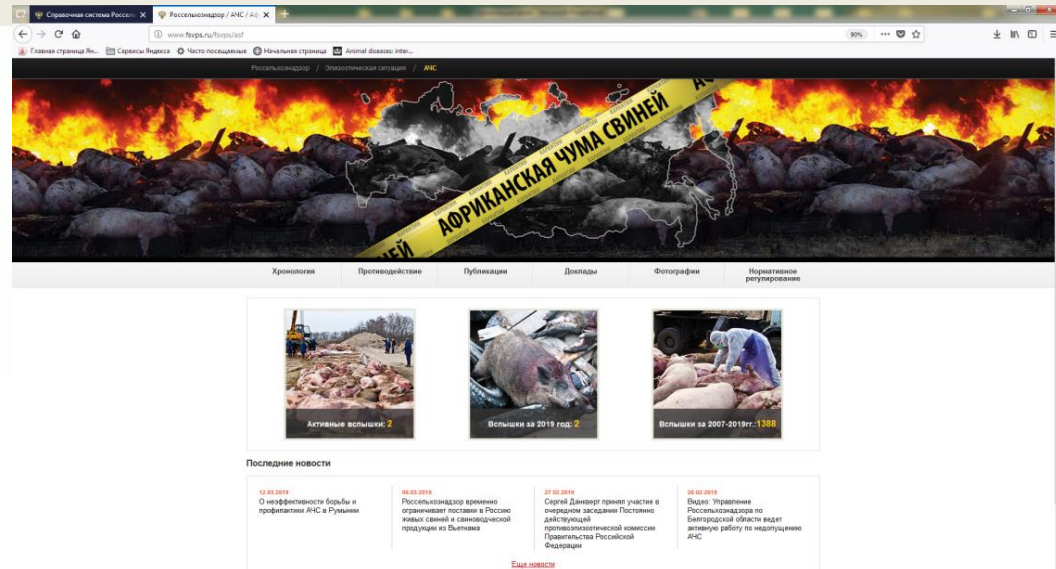

Риск возникновения новых очагов АЧС в 2019 г.

DIAGNOSIS OF AFRICAN SWINE FEVER

Samples to be sent to the laboratory

- Lymph nodes
- Spleen
- Kidney
- Lung
- Blood and serum

<http://www.fsvps.ru/fsvps/iac>

MAIN RECOMMENDATIONS:

I. Enhancing legal, regulatory preparedness and coordination for ASF at national level

II. Increasing the competency of VS officials and extending the capabilities of veterinary services

III. Awareness-raising
